Project Name	Plasma Donor Application
Maximum Marks	2 Marks

#### Problem Statement:

During the COVID 19 crisis, the requirement of plasma became high and the donor count being low. Saving the donor information and helping the need by notifying the current donors would be a helping hand. It is very difficult to find the respective blood group donors when anyone is in need.

In regard to the problem faced, an application is to be built which would take the donor details, store it and inform them upon a request. By using this application, the users can either raise a request for plasma donation or requirement. We hereby took a step forward to build a system to create a network of people who can help each other in need. We propose an application where the plasma banks can properly update the stock availability and donor can register themselves to donate the plasma and User can find the plasma availability nearby them.
